

Doorlock Pull-to-Open

Description

Pull open device for closing and opening doors of domestic appliances, in particular dryers, with electric function.

Thanks to the presence of an internal toggle mechanism, during the closing operation on the hook a traction force is applied which guarantees a constant and enduring seal over life time. According to the specific request of the customer

it is possible to decide the opening or closing force of the door, thus offering the most suitable solution for his own application.

Thanks to an innovative European patent, the device is also available with the new snap fitting system, which avoids the use of the screws and at the same time, reduces assembly times on the panel.

Main Benefits

- Customization of the opening and closing force of the door
- No use of screws and reduced panel mounting times
- Single device for checking the effective closure of the dryer door

Certifications

Rold CA Series

Doorlock Pull-to-Open

All products are approved to current Quality Standards. The Company reserves the right to make technical modifications to improve the product. Sizes indicated are not binding. For special applications, not mentioned here, please ask the manufacturer for further information. Uncorrect electrical wiring or assembling may cause overheating of the switch and consequent risk of short-circuit and fire. Update: March 2022
